

My Own **Mobile Classroom**

Imagine you have been asked to design a mobile school. That's just what the architect behind the floating boat schools in Bangladesh did. He looked at the problem of flooding in monsoon season and designed a suitable alternative to a building for education. What would your school be like? Why would it have to be mobile? What special innovations might it have to make it a great teaching space? Research existing boat schools, Door Step schools and the mobile schools program (www.mobileschools.org) to give you some inspiration!
