What is this resource and how do I use it?

Heard of BIDMAS? Your child can learn about the order of operations with this activity. There is some information before they begin, then two sets of questions for them to try. In one set, they'll be following the order of operations to complete the calculations. In the other set, they'll be adding brackets to make the answer correct.

What skills does this practise?

Order of Operations

Addition and Subtraction

Multiplication and Division

Using Brackets

Further Activity Ideas and Suggestions

There are lots more activities to help your child practise using the four operations at the [Parents Hub](#). They can explore using brackets with [this activity](#) or develop their understanding of square and cube numbers with [this activity](#) - both important skills to master the order of operations.

Order of Operations

BIDMAS or BODMAS are both acronyms used to help us remember the order of operations. This is a rule that tells us the correct sequence of steps when approaching a maths calculation.

B

brackets

()

Complete anything in brackets first.

I or O

indices or order

x^2 $\sqrt{\quad}$

Next, apply any orders of - like indices or square roots.

D

division

$\div$

Now, complete any divisions.

M

multiplication

$\times$

Then, complete any multiplications.

A

addition

$+$

Now, complete any additions.

S

subtraction

$-$

Finally, complete any subtractions.

Order of Operations

Complete these calculations.

1 $(3 + 6) \times (8 - 5) =$ _____

2 $8 \times (6 + 3) + 5 =$ _____

3 $9 \times (5 + 6) + 4 =$ _____

4 $9 \times 3 + 18 \div 9 =$ _____

5 $23 - 3 \times (5 + 8) =$ _____

6 $7 + 8 \times 9 - 4 =$ _____

7 $(19 - 7) + 8^2 + 9 =$ _____

8 $8 \div (7 - 5) \times 6 =$ _____

9 $(124 \div 2) \times 2^2 =$ _____

10 $8 + 7 \times (12 - 5) =$ _____

Order of Operations

Put brackets in these calculations to make the answers correct.

11 $24 - 17 \times 8 - 16 = 40$

12 $8 \times 7 - 4 \div 6 = 4$

13 $7 + 6 \times 12 - 7 = 37$

14 $9 \times 7 - 6 \times 3 = 27$

15 $5 + 11 \div 7 - 3 = 4$

Order of Operations Answers

1. $(3 + 6) \times (8 - 5) = 27$

2. $8 \times (6 + 3) + 5 = 77$

3. $9 \times (5 + 6) + 4 = 103$

4. $9 \times 3 + 18 \div 9 = 29$

5. $23 - 3 \times (5 + 8) = -16$

6. $7 + 8 \times 9 - 4 = 75$

7. $(19 - 7) + 8^2 + 9 = 85$

8. $8 \div (7 - 5) \times 6 = 24$

9. $(124 \div 2) \times 2^2 = 248$

10. $8 + 7 \times (12 - 5) = 57$

11. $(24 - 17) \times 8 - 16 = 40$

12. $8 \times (7 - 4) \div 6 = 4$

13. $7 + 6 \times (12 - 7) = 37$

14. $9 \times (7 - 6) \times 3 = 27$

15. $(5 + 11) \div (7 - 3) = 4$
